

## **Save the ocean for the sake of future generations.**

Water is essential for the survival of all living organisms on the planet. Oceans cover nearly 70% of the earth's surface, leaving only 30% for dry land. It ensures human and other species' long-term [survival](#) on the planet. The ocean produces half of the world's oxygen and feeds billions of people worldwide.

Many people work in the fishing industry, which benefits the economies of many countries. 40 million people are expected to find work in ocean-based industries in the coming years. In terms of benefits, countries with a sea on their territory benefit from being self-sufficient.

Despite its numerous advantages, the ocean requires our attention and assistance. Over the last 50 years, people's careless behavior toward the sea has been observed, contributing to its pollution. Polluted oil from chimneys combines with water in our clogged drainage system and ends up in the ocean. As a result, thousands of sea creatures are killed or stunted.

It is past time for a concerted effort to revitalize and restore the ocean to its former glory. Toxic industrial chemicals must be phased out and depleted as far away from bodies of water as possible. Beachgoers should also avoid throwing trash into the sea. Governments must also raise [awareness](#) and impose harsh penalties on those who destroy the planet's most valuable gift, Nature.
